Cairo, Egypt | +201116615352 | belalofficial123@gmail.com | github.com/Belaleatsbanana | linkedin.com/in/belal-taha-25060a263

SUMMARY

Software engineer with hands-on experience in Python, LLM fine-tuning, multi-agent architectures, and data pipelines, complemented by full-stack and mobile development. Built a voice-controlled AI pair-programming system using LoRA fine-tuning on Qwen models and a multi-agent adversarial testing loop. Two-time fully funded scholarship recipient for ranking first in batch at the British University in Egypt (GPA 4.0/4.0), with ICPC Egyptian Collegiate Programming Contest Finals participation. Passionate about applied generative AI and production-ready AI systems.

SKILLS

Python, C++, Machine Learning, Deep Learning, LLM Fine-Tuning, LoRA, Hugging Face, Multi-Agent Architectures, SQL, Pandas, NumPy, Docker, Data Engineering, REST APIs, Git, React, Flutter, LiveKit, DevOps

EXPERIENCE

Frontend Developer — Nafis Technologies | Cairo, Egypt | Jul 2024 – Sep 2024

- Built single-page application features in Vue.js, designing reusable components and implementing Vuex state management for a consistent UX
- Integrated RESTful APIs into frontend views, collaborating closely with backend engineers to align request/response contracts and resolve integration issues
- Managed client-side routing and application state for seamless navigation without page reloads

Data Analyst — ALX Africa | Cairo, Egypt | May 2023 – Dec 2023

- Built data cleaning and transformation pipelines in Python (Pandas, NumPy) to prepare raw data for analysis and AI-ready reporting
- Wrote optimized MySQL queries across multiple tables to extract business insights from large datasets
- Designed interactive Power BI dashboards to visualize KPIs and communicate findings to non-technical stakeholders
- Performed exploratory data analysis using spreadsheets for ad-hoc reporting and quick-turnaround data requests

Flutter Developer — ICTHub | Cairo, Egypt | Jan 2024 – Feb 2024

- Developed a cross-platform (Android & iOS) course management app in Flutter with role-based authentication for students, teachers, and admins
 - Implemented Cubit (BLoC pattern) state management for predictable state transitions and clean separation of UI and business logic
 - Built reusable widget components for course listings, enrollment flows, and grade management screens
-

PROJECTS

Voice-Controlled Pair Programming with Fine-Tuned Coder and Adversarial Tester Agents

github.com/Belaleatsbanana/talky-coder

- Designed and built a multi-agent AI pair-programming tool where a fine-tuned coder agent and an adversarial tester agent collaborate to solve competitive programming problems
 - Fine-tuned the coder agent using LoRA on Qwen models, managing the full fine-tuning pipeline from data preparation to evaluation
 - Integrated LiveKit for real-time voice interaction, enabling voice-controlled agent collaboration
 - Built surrounding application infrastructure with Tauri and Electron to deliver a desktop-ready product
 - **Tech:** Python, LoRA, Qwen, LLM Fine-Tuning, LiveKit, Tauri, Electron
-

EDUCATION

B.Sc. in Computer Science — The British University in Egypt | Cairo, Egypt | 2021 – Jul 2026

- GPA: 4.0/4.0
 - Two-time recipient of Fully Funded Tuition Scholarship for ranking first in batch (awarded 2023 and 2024)
-

ADDITIONAL

- **ICPC Egyptian Collegiate Programming Contest Finals** (Jul 2025): Participated in a team of three solving algorithmic problems under time pressure
- **Problem Solving Coach**, The British University in Egypt (Sep 2023): Created teaching material and coached students in competitive programming basics
